MR 42-23

Andreg and Copper Nickel - Henry Cooper, 2 mi. SW of Bonti Camp along highway.

A shaft and several pits in an igneous amphibolite (?). Very little of any sulfide showing in the rock. Some chalcopyrite and perhaps others (not seen).

Granite occurs on the dump around the shaft, but none crops out in the immediate vicinity of the mine. Shaft is timbered for seveal feet and then there is water.

In the latest pits dug, there is a brownish mineral which is supposed to carry nickel.

(Visited with Albert R. Nelson.)

NICKEL

Andrea + Cooper Nickel - Henry Cooper 2 m³ [illegible]

15-IX-112

A shaft and several pits in an igneous amphibolite (?)

Very little of any sulfide showing in the rocks some

chalcopyrite and perhaps others (not seen)

Granite occurs on the dump around the shaft

but none crops out in the immediate vicinity of

the mine. [illegible] and

they there is water.

In the [illegible] there is a brownish mineral

which is supposed to carry nickel.
