

Next stop on the ABCs tour of Wyoming's geologic wonders ...

Fractures Below ***F***reds Mountain

- *West side of the Tetons, near Grand Targhee Resort*
- *All of the limestones of the Paleozoic formations are intensely fractured, especially the Death Canyon Member of the Gros Ventre Formation*
- *Fractures in limestone are often filled with calcite*

*Photos by: WSGS oil & gas geologist
Ranie Lynds*

Interpreting the past, providing for the future
