

A. F. Hagner, 1942

MR 42-16

Campbell Feldspar

Pit about 25' long and 6' to 8' wide. There is a lot of quartz in this pit - probably too much for a paying property. The pit is 8' deep in places. N.G.

Even some of the feldspar - free from the large quartz areas - is graphic feldspar - quartz intergrowth. The surface around the pit shows largely quartz.

Campbell Feldspar

12-15-02 Pit about 25' long and 6' to 8' wide. There is a lot of quartz in this pit - probably too much for a paving property. The pit has a surface of loose rocks.

Even now if the pit had been free from the large quartz areas - is probably feldspar - quartz, very much. The surface around the pit shows largely quartz.
