OPEN FILE REPORT 87-1P

PRELIMINARY MAP OF KNOWN SURFICIAL STRUCTURAL
FEATURES FOR THE CHEYENNE 1° x 2° QUADRANGLE

compiled by

Jon K. King, Phillip L. Greer, and Alan J. VerPloeg

Laramie, Wyoming
1987

This report has not been reviewed for conformity with the editorial standards of the Geological Survey of Wyoming.

This listing of sources of information and index map were prepared to accompany the preliminary map of known surficial structural features for the Cheyenne 1°x 2° Quadrangle.

Sources of geologic data

General

(These references are the sources of geologic data where more detailed, specific maps were not available).

EXPLANATION

-  **Anticline**- arrows perpendicular to axis show asymmetry, i.e., short arrow indicates flank with steeper dip. Axis is dashed where covered or approximately located. Arrow on axis indicates direction of plunge.
-  **Monocline**- arrow indicates flank with steeper dip. Axis is dashed where covered or approximately located. Queried where existence is questionable.
-  **Normal Faults**- ball on downthrown block (dashed where covered or approximately located). Queried where existence is questionable.
-  **Thrust/Reverse Faults**- teeth on upthrown block (dashed where covered or approximately located). Queried where existence is questionable.
-  **Shear Zones**
-  **Possible Active Fault** - as identified by Case (1986).
