GEOLOGICAL SURVEY OF WYOMING

Lucky Day No. 14 - Sec. 18

, . 7

Ed W. Peterson

Copper property. A shaft 150' deep had water. Mostly chrysocalla and cuprite on the dump, some malachite. Can't tell mich about this

According to Peterson, there is a gold vein at a depth of 80' which assayed 120 per ton and is 8' wide.

The copper runs 8-10% and was worked years ago. Several carloads have been shipped.

Visited with Peterson and oldest son.
