BIBLIOGRAPHY OF WYOMING GEOLOGY

1945-1949

INTRODUCTION

Bulletin 57, covering the period 1945 through 1949, is the third in a bibliographic series of the Wyoming Geological Survey. In addition to presenting new material, it is a supplement to Bulletin 53, *Bibliography of Wyoming Geology*, 1917-1945. The lists of periodicals published in the United States Geological Survey Bibliographic Index 1940-1949 and in Wyoming Geological Survey Bulletin 53 were used as a base in the preparation of this supplement, but references are limited to those volumes available at the libraries at the University of Wyoming and the United States Geological Survey at the Federal Center in Denver.

Bulletin 57 lists some references that were published between 1917 and 1945 but were omitted from Bulletin 53 because of wartime delays in publication and distribution. A few titles from the first bibliography are repeated so that publications in which they were reprinted after 1945 could be included. Textbooks and most general reference books containing information about Wyoming geology were omitted. Likewise, unpublished theses on the geology of Wyoming are not included here; a compilation of these is available at the office of the Geological Survey of Wyoming, Laramie.

In general, the bibliographic style used is that of the United States Geological Survey. The authors are arranged alphabetically, and the papers, with full title and medium of publication, are listed chronologically under the author's name. An index by locality or subject or both is included.

Daniel N. Miller, Jr., Wyoming State Geologist, supervised the compilation of the bibliography. The compiler is indebted to members of his staff for their assistance and to librarians at the University of Wyoming, especially at the geology library, and to those at the United States Bureau of Mines, Laramie; and at the United States Geological Survey at the Federal Center in Denver. The helpfulness of members of the University of Wyoming geology faculty, and of personnel at the United States Geological Survey office in Laramie is also gratefully acknowledged.
