GEOLOGICAL SURVEY OF WYOMING

GEOLOGIC MAP  
 Showing Approximate Boundary of Soda Deposits  
 Green River Wyoming

The approximate area which is soda-bearing. The depth ranges from 20 feet to 250 feet to the top bed. Within this area are scattered streaks which have been analyzed. They have a direction which is southwest and northeast corresponding to the axes of troughs. They are conspicuous on the west limb of the Rock Springs Anticline. The Soda area has been made to include seeps, springs and known wells.
